

- *Air-suspension*

General information VB-NivoAir

Especially for the coil sprung light commercial vehicles VB-Airsuspension can supply a full automatic rear-axle air-suspension called VB-NivoAir, from the end of 2005.

The VB-NivoAir will keep the rear of the vehicle at a **constant ride-height**, independent of the load. Furthermore the VB-NivoAir – as every full rear-axle air-suspension system of VB-Airsuspension – will establish a **higher comfort** in driving and a more **stable drivability** (especially heavy loaded vehicles), thus a **safer behaviour** of the vehicle.

Lowering the ride-height is very easy with the VB-NivoAir and there is no need to make additional cost (when mentioned during assembly). Therefore you can drive a 'lowered car' without having to cut back on comfort. Plus, you can load your vehicle to the maximum without any problems.

The VB-NivoAir is supplied as a **complete kit**. The fitting can be done without **welding, cutting, grinding or drilling** on or in the vehicle and will take up to approximately three hours.

Available for:

- Mercedes-Benz Vito**
- Volkswagen Transporter T5**
- Renault Trafic**
- Opel Vivaro**
- Nissan Primastar**

The technical specifications are the standard VB-Airsuspension versions. Other specifications are on request.
VB-Airsuspension reserves the right to make changes without prior notification.
