

- ***Air-suspension***

Trailer air-suspension

Especially for light weight trailers VB-Airsuspension can supply two types of full air-suspension systems suitable for axle load until 2 or 4t. While in this segment weight and height are an important factor, both aspects were kept as small as possible. Depending on the type of axle the right fitting material is delivered, so the axle can be clutched easily.

VB-Airsuspension offers two constructions, of which the distance of the axle level and the bottom of the chassis are either 125 or 175mm.

The kits are delivered complete inclusive of the diagrams needed for the RDW examination.

The supply consists of:

- Main springs including leaf spring brackets, eccentric bolts, spring seats and axle clamps;
- Air bellows including bump stops and fitting material;
- Shock absorbers

Optionally VB-Airsuspension can supply a mechanical or electronic height regulator.

The weight is approx. 45 kilos.

Axle measurements: 45, 65, 70, 75 and Ø65 (other measurements on request).

The technical specifications are the standard VB-Airsuspension versions. Other specifications are on request.

VB-Airsuspension reserves the right to make changes without prior notification.
